FOR IMMEDIATE RELEASE

September 2, 2003

PACIFIC COAST GROUNDFISH FISHERY OFF SOUTHERN CALIFORNIA

Changes to Area Closures for Commercial Non-Trawl and Recreational Fisheries off Southern California; Corrections to Trawl and Non-trawl RCA Boundaries

Effective September 2, 2003

This public notice applies only to fisheries south of 40°10' N. lat. The National Marine Fisheries Service (NMFS) announces changes to the closed areas affecting the limited entry fixed gear fleet, the open access non-trawl gear fleet and the recreational fishery in southern California (south of 34°27' N. lat. to the U.S./Mexico border). NMFS also announces several corrections to the existing Rockfish Conservation Area (RCA) boundaries affecting the commercial trawl and non-trawl fleets. All changes will be effective September 2, 2003. RCA boundary changes that are effective September 2, 2003, for the trawl "A" platoon are effective September 16, 2003, for the "B" platoon.

At their June 16-20, 2003 meeting in Foster City, California, the Pacific Fishery Management Council (Pacific Council) recommended changes to current groundfish management measures. Most changes were implemented on July 1, 2003 (68 FR 40187, July 7, 2003). Creating a new 30 fm boundary line in southern California was delayed because of the need for additional analysis prior to implementation and because estimated impacts on canary rockfish were too high with implementation before September 1, 2003. The conservation area boundary line affecting the commercial non-trawl fisheries (limited entry

fixed gear and open access non-trawl) and the recreational fishery is moved from 20 fm to 30 fm south of 34°27' N. lat, except in the Cowcod Conservation Area (CCA) where the boundary will remain at 20 fm. [Note: The CCAs are distinct closed areas separate from the non-trawl RCA.]

New 30 fm Boundary Line affecting the Limited Entry Fixed Gear, Open Access Non-trawl Gear, and Recreational Fleets in Southern California

Beginning in 2003, the limited entry fixed gear and open access non-trawl fleets in California have been severely constrained by low trip limits and limited nearshore fishing opportunities, with the non-trawl RCA (the area closed to most fishing with non-trawl gear) extending from the 20 fm depth contour to latitude and longitude coordinates approximating the 150 fm depth contour. These management measures were designed to limit the incidental take of bocaccio rockfish and

keep the catch of bocaccio within its 2003 optimum yield (OY) of no more than 20 mt. The recreational fishing fleet in California has also been similarly constrained, by a reduced season length (July - December) and has generally been restricted to fishing inshore of the 20-fm depth contour, to minimize the incidental take of bocaccio and other overfished rockfish species.

Taking into account the most recent bocaccio stock assessment information released in May 2003 that shows an improvement in the status of the stock and taking into account the economic hardship resulting from restrictive management measures necessary to keep the incidental catch of bocaccio within its 2003 OY, the Pacific Council recommended that the 2003 bocaccio OY be flexible enough to allow for a modest increase in nearshore fishing opportunity. Based on the Pacific Council's recommendations, NMFS is implementing the following management measures for the months of September through December:

- ***For the limited entry fixed gear and open access non-trawl gear fleets***, south of 34°27' N. lat. to the U.S./Mexico border, the eastern, inshore boundary of the non-trawl RCA, an area closed to fishing by those fisheries, will be a boundary line approximating the 30 fm depth contour along the mainland coast, around the Channel Islands, and around seamounts, except in the Cowcod Conservation Areas (CCAs) where the inshore boundary will remain at 20 fm [Note: The CCAs are distinct closed areas separate from the non-trawl RCA]. The western, seaward boundary of the non-trawl RCA will remain at a line approximating 150 fm. Between 40°10' N. lat. and 34°27' N. lat., the eastern, shoreward boundary of the non-trawl RCA remains at a boundary line approximating the 20 fm depth contour.
- ***For the recreational fishery***, south of 34°27' N. lat. to the U.S./Mexico border, the seaward boundary of the open area will be

marked by a boundary line approximating the 30 fm depth contour along the mainland coast, around the Channel Islands, and around seamounts, except in the CCAs where the boundary will remain at 20 fm. Between 40°10' N. lat. and 34°27' N. lat., recreational fishing is still prohibited seaward of the 20 fm depth contour, except that recreational fishing for sanddabs is permitted seaward of the 20 fm depth contour.

Coordinates for the new boundary line approximating the 30 fm depth contour for the limited entry fixed gear fleet, the open access non-trawl gear fleet and recreational fleet are available later in this document under the heading "Coordinates for Boundary Lines."

Trip limit tables for southern California south of 40°10' N. lat. (Table 3 (South), Table 4 (South) and Table 5 (South)) are included at the end of this public notice. Table 4 (South) and Table 5 (South) reflect the non-trawl RCA changes.

Corrections

In addition to creating new 30 fm RCA boundaries along the mainland coast, around the Channel Islands, and around seamounts off the state of California, corrections to existing RCA boundaries are also being implemented effective September 2, 2003. The first correction is to the 200 fm coastwide trawl RCA boundary. In areas off the state of California, the 200 fm trawl RCA boundary was found to extend into waters as deep as 300 fm. This resulted in the groundfish trawl fleet being prohibited from fishing in areas where fishing with trawl gear should be permitted. Therefore, to better align the 200 fm trawl RCA boundary with the 200 fm depth contour, several of the coordinates for the 200 fm trawl RCA boundary were corrected. Coordinates for the trawl RCA boundary line approximating the 200 fm depth contour for the limited entry trawl and open access exempted trawl fleet are available later in this document under the heading "Coordinates for Boundary Lines."

Throughout 2003, NMFS has clearly specified trawl RCA boundaries around islands and seamounts off California, however, NMFS has not clearly specified the non-trawl RCA boundaries around those same islands and seamounts. To correct this oversight non-trawl RCA boundaries around islands and seamounts off California are now specified in the trip limit tables (Table 4 (South) and Table 5 (South)).

With the creation of the new 30 fm RCA boundaries off California, coordinates were generated for additional islands (i.e., the northern Channel Islands) off California as well as the southern California islands that previously had trawl RCA boundaries. The 30 fm RCA boundaries off the northern Channel Islands incorporate the state marine protected areas which are also closed to fishing.

Through the process of reviewing maps of and bathymetry data for these islands, the state of California requested two name changes. This emergency rules addresses the name change by more appropriately referring to the Orange County Seamount as Lasuen Knoll and referring to Mira's San Diego Rise as San Diego Rise.

Additionally, RCA boundaries had been unnecessarily generated for two of the southern Channel Islands, specifically Santa Barbara Island and San Nicholas Island. After closely reviewing maps of these islands, the state of California realized that these islands fall completely within the Western CCA, therefore, groundfish fishing is already prohibited around those islands seaward of the 20 fm depth contour. To help minimize the number of RCA boundary coordinates, California requested that the RCA boundaries around Santa Barbara Island and San Nicholas island be removed. In light of these corrections and in an effort to be clear about which islands belong to which island groupings, the northern Channel islands include San Miguel, Santa Rosa, Santa Cruz, and Anacapa; the southern Channel islands include Santa Catalina Island and San Clemente Island; and the seamounts include Lasuen Knoll and

San Diego Rise.

Coordinates for Boundaries Lines

This section contains coordinates for the following boundary lines: 30 fm recreational and non-trawl RCA along the coast, 30 fm recreational and non-trawl RCA around the northern Channel islands, 30 fm recreational and non-trawl RCA around the southern Channel islands and seamounts, 150 fm non-trawl RCA around islands and seamounts, 200 fm trawl RCA coastwide, 200 fm trawl RCA around islands and seamounts.

	JUL-AUG	SEP-OCT	NOV-DEC
Rockfish Conservation Area^{10/} (RCA):			
40°10' - 38° N. lat.	60 fm - 200 fm	60 fm - 200 fm (line modified to incorporate petrale sole fishing grounds)	
38° - 34°27' N. lat.	60 fm - 200 fm	60 fm - 200 fm (line modified to incorporate petrale sole fishing grounds)	
South of 34°27' N. lat.	100 fm - 200 fm along the mainland coast; shoreline - 200 fm around islands	100 fm - 200 fm along the mainland coast; shoreline - 200 fm around islands (line modified to incorporate petrale sole fishing grounds)	

Small footrope or midwater trawl gear is required shoreward of the RCA; all trawl gear (large footrope, midwater trawl, and small footrope gear) is permitted seaward of the RCA.

A vessel may have more than one type of limited entry bottom trawl gear on board, but the most restrictive trip limit associated with the gear on board applies for that trip and will count toward the cumulative trip limit for that gear. A vessel may not have limited entry bottom trawl gear on board if that vessel also has trawl gear on board that is permitted for use within a RCA, including limited entry midwater trawl gear, regardless of whether the vessel is intending to fish within a RCA on that fishing trip. **See IV.A.(14)(iv) for details.**

Vessels participating in the California halibut fishery south of 38°57'30" N. lat. are allowed to (1) land up to 100 lb/day of groundfish without the ratio requirement, provided that at least one California halibut is landed and (2) land up to 3,000 lb/month of flatfish, no more than 300 lb of which may be species other than Pacific sanddabs, sand sole, starry flounder, rock sole, curlfin sole, or California scorpionfish (California scorpionfish is also subject to the trip limits and closures in line 25.)</p>
